

Startup and Shutdown Instructions Local (from IDE)

Startup Instructions

❶ If this is the first time running, then follow these instructions:

- In terminal, type the following
- (assuming already at root of project directory)

```
1 cd client  ## moves into client (Frontend folder)
```

```
1 npm install  ## install npm dependencies
```

```
1 npm run dev  ## runs it
```

- Open a separate terminal in parallel
- (assuming already at root of project directory)

```
1 flask run  ## runs Backend Flask
```

- Then open the link provided in the first terminal (Frontend)
- <http://localhost:5173/>

```
1  
2 > client@0.0.0 dev  
3 > vite  
4  
5  
6  
7 VITE v7.1.3  ready in 1186 ms  
8  
9 → Local:   http://localhost:5173/  
10 → Network: use --host to expose  
11 → press h + enter to show help
```

❷ If this is not the first time running (have already installed npm dependencies)

- In terminal, type the following
- (assuming already at root of project directory)

```
1 cd client  ## moves into client (Frontend folder)
```

```
1 npm run dev  ## runs it
```

- Open a separate terminal in parallel
- (assuming already at root of project directory)

```
1 flask run  ## runs Backend Flask
```

- Then open the link provided in the first terminal (Frontend)
- <http://localhost:5173/>

```
1  
2 > client@0.0.0 dev  
3 > vite  
4  
5  
6  
7 VITE v7.1.3  ready in 1186 ms  
8  
9 → Local:   http://localhost:5173/  
10 → Network: use --host to expose  
11 → press h + enter to show help
```

Shutdown Instructions

- Enter **Ctrl^C** into both terminals to exit
- Then close Web App tab in browser

```
1 | Ctrl^C
```

- *Optional
- Can choose to restore the database files if no changes within templates were meant to be updated to all

```
1 | git restore database
```

Remote (deployed on [Heroku](#))

Startup Instructions

- Open the url of the WebApp powered by [Heroku](#)
- Currently it is:
- It will direct user directly to Login Page

Shutdown Instructions

- Close the tab of the WebApp in browser
-
