MVP

Minimum Viable Product is the product's pilot functioning version, with basic feature set
Built quickly without many resources to test hypotheses

*not a demo or prototype
it is a working solution that users can interact with
- brings value and solves user problems

MVPs are developed gradually instead of high investment and large scale

Subject Coordinator

Create / manage current assessment's use scales

Break assessment down into tasks

Build Scales using Drag and Drop

Filter by task type

Apply changes to existing scales

Download/Export template

Gray out NO-AI fields

access Uni links in scales
(ai acknowledgement)

create / edit template scales

agree on acceptable
AI use examples

monitor / manage repository

Standardisation of Templates

consistent
communication

Admin

Consistency in Expectations
and Terminolgy

Students

Create subject space

Fill in form given by their subject coordinators

ensure consistent common
vocabulary used
for different subjects /
different assessments

FIX defaults for each assessment type

** not using the system for now **

Verify/Approve and Apply updates

Maintain system (users too)
